

Wash Rack Front

Battery Wash Racks

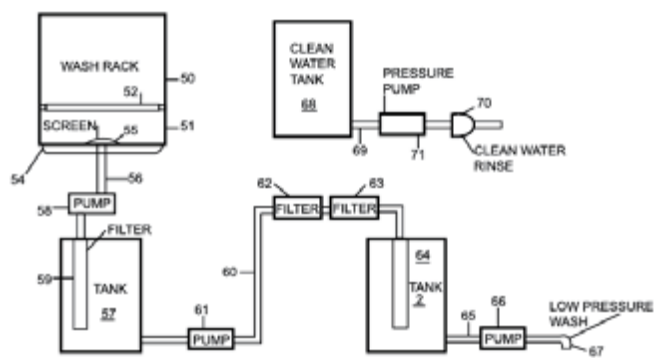

Eagle Eye's battery wash racks are designed to allow washing of fork-lift type batteries. The station connects to no drain or water supply. It is a totally self-contained closed loop system, except for electricity. This wash station uses low pressure to clean and rinse batteries, although high pressure is also an option.

Product Features

- Water consumption can be as little as one quart per battery
- There is no risk of polluting the environment if used as directed
- Lower waste disposal cost, if any
- Portable design allows station to be moved with forklift
- Neutralizer additive is used to maintain a pH of 7-8
- **Optional:** Top canopy to prevent any over spray from escaping the top and sides
- **Optional:** Rollers on rack floor to assist in battery loading and positioning
