

SITE HEALTH CHECKUP

Eagle Eye's Site Health Checkup is like a doctor's visit but we come to you and your site to try to ascertain your standby power systems state of health. Our customized inspections, whether you are a utility, data center or communications facility, will determine if you are compliant, safe, risk free and adequately prepared for the purpose that the standby power system was required to be there in the first place. And we may possibly extend the life of your batteries.

Our customized inspections, whether you are a utility, data center or communications facility, will determine if you are compliant, safe, risk free and adequately prepared for the purpose that the standby power system was required to be there in the first place. If you can truly answer yes to the above questions then read no further, you don't need the new service that Eagle Eye is offering. We call it "Site Health Checkup" operated by our power system site evaluation and survey folks. Many recent studies, articles and technical papers have indicated that batteries are the weakest link in any battery backed power system. A recent technical paper presented at Battcon, the International Stationary Battery Conference, indicated that 50% percent of all battery systems are not being properly charged.

CHECK LIST

YES NO

- ☐ ☐ *Are your batteries being charged properly?*
- ☐ ☐ *Are they configured, operated and maintained correctly?*
- ☐ ☐ *Is the power system input and output cabling sized correctly?*

YES NO

- ☐ ☐ *What about the system grounding, is it adequate?*
- ☐ ☐ *What about the electrical protection devices, are they coordinated correctly?*
- ☐ ☐ *Are all applicable codes and standards being met?*

You will receive a full report on the status and compliance of your power system including recommendations for any corrective actions.
